

# Oasis Globe - Technician App

What the app does - a simple overview for the business owner

**In one line:** an app on each technician's phone that shows their jobs for the day and lets them complete every task - from reaching the customer to collecting payment - step by step. The app automatically sends the customer a WhatsApp update at each milestone, and the office sees everything live.

This app is **connected to our existing website** (manager dashboard + WhatsApp system) - it is not a separate system. A job assigned to a technician in the dashboard appears directly in that technician's app.

## A technician's day (with an example)

Say **Ramesh** is our technician:

- 1 He opens the app in the morning and sees his name, today's date and his **rating (4.7 stars)**. Three numbers at the top: **Pending**, **Today's jobs**, and **Done today**.
- 2 Below, all his jobs are listed - carried-over, today's, and **repeat calls** (which are not charged again).
- 3 He opens a job and sees the customer name, address, the problem and the purifier model - with **Call** and **Maps** buttons.
- 4 He taps **Accept Job** -> the customer automatically gets a WhatsApp message that a technician is coming.
- 5 He taps **I'm On The Way** -> the customer gets the arrival time (ETA).
- 6 On reaching, he taps **Mark Arrived** -> the app records his **GPS location** as proof of the visit.
- 7 He fills a short form: what is wrong, the **water TDS reading**, which parts are needed, and **photos** (before / damage / old part).
- 8 He **builds an estimate** - charge + parts total - and sends it to the customer on WhatsApp for approval. (If the customer is unavailable, the manager can approve.)
- 9 Once the customer **approves**, he does the repair, then enters the machine's **final output TDS** (proof the water is now clean) and takes **photos of the new parts installed and the old / used parts removed** (proof of genuine parts and real work).
- 10 He **collects payment** - **UPI / Cash / Card**, even split across methods. For UPI he can show the customer a **QR code**.
- 11 He **closes the job** -> a 'Job Closed Successfully' screen appears, the next service date is noted, and Ramesh sees how it affects his rating and incentive.

The whole job runs in one straight line - no step can be skipped.

## What the app contains (screen by screen)

### 1. Login

The technician logs in with their mobile number + OTP. (A 'Demo Login' button is also there for showing demos.)

### 2. Home - Today's jobs

- Top: name, rating, an **Online/Offline** toggle, and a notifications bell.

# Oasis Globe - Technician App

What the app does - a simple overview for the business owner

- Jobs grouped into sections: **carried-over pending**, **today's**, **completed today**, **repeat calls (free)**, and **escalations (urgent)**.
- Each job shows: customer, area, time, problem, model, and the **visit charge** (Rs.250 / Free), with Call / Maps / Open buttons.

### 3. The Job - full work, step by step

Accept -> On the way -> Arrived -> Diagnose -> Estimate -> Approval -> Work done (final TDS + parts photos) -> Payment -> Close. At each step the customer gets exactly **one clean WhatsApp message** (no spam).

### 4. My Reviews

The technician's average rating, what customers rated them on (politeness, first-time fix, on-time arrival, etc.), recent feedback, and a 'raise your rating to earn higher incentive' nudge.

### 5. Help / Support

- Direct call button for the manager and office, plus **Emergency** support.
- Quick guide for common problems (Low Flow, Bad Taste, Leakage, No Water).
- **What to say to the customer** - ready scripts (visit charge, TDS, asking for approval, handling an angry customer).

## What the business gains

- **No job is ever lost.** Every job is tracked in the app, start to finish.
- **Clean accounting.** Which charge, which parts, how much, and how money came in (UPI/Cash/Card) - all recorded.
- **GPS proof.** Whether the technician actually visited - location is recorded.
- **No wrong charging.** Charge type is fixed. **Warranty / AMC** customers free, and a **repeat within 10 days** is free - the app handles it.
- **No paid work without approval.** No paid repair happens without the customer's **consent** - fewer disputes.
- **Timely customer updates.** One clean WhatsApp message at each milestone - not too many, not too few.
- **Technician performance is visible.** Ratings + fewer repeat complaints - directly tied to incentive.
- **New business opportunities.** 'Customer wants a new purifier or a special part?' - one tap creates a lead for the manager to follow up.
- **Everything in one place.** This app, the manager dashboard, and WhatsApp - one system, one set of data. The dashboard shows live what the technician did.
